EDUCATION

Manipal Institute of Technology

Bachelor of Technology (B.Tech) in Information Technology

Bengaluru, KA

Expected June 2027

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management (SQL), OOP (Java), Computer Networks, Cryptography, Agile Software Engineering, Software Testing, AI, Machine Learning, Data Mining, Android Development

EXPERIENCE

CandidRoot Solutions Pvt. Ltd. — Data Analytics Intern

May 2026 – July 2026

Odoo Silver Partner

Ahmedabad, GJ

- Cleaned and validated client master data with Python (pandas, fuzzy dedup) into a staged PostgreSQL layer, reducing manual audit effort from days to under an hour.
- Developed SQL ETL over Odoo's PostgreSQL schema for cost roll-ups, inventory aging and reconciliation across receivables and stock valuation, closing about Rs 1.3L variance pre-go-live.
- Designed Power BI dashboards on curated reporting tables covering aging buckets, per-unit margin and branch profitability, replacing a weekly manual Excel report.

PROJECTS

Drifting Oracle | FastAPI, Python, React, Databricks, XGBoost, Docker, Kubernetes, Prefect, CI/CD, LangGraph, ChromaDB

- Engineered a credit-risk model that detects when live loan data drifts from its training data and auto-retrains itself, tracked via Population Stability Index (0.25 threshold) across 7 features, triggering Champion (20 features)/Challenger (8 features) XGBoost retraining that only promotes a new model when it beats the live model's AUC (0.73 → 0.76).
- Deployed on Docker/Kubernetes with Prefect-orchestrated retraining, Databricks Unity Catalog + MLflow for logging/tracking, and a 47-test pytest suite via GitHub Actions CI/CD.
- Integrated a LangGraph + ChromaDB RAG agent that explains loan rejections in plain language, grounded in RBI/SEBI regulations, with automatic hallucination-detection retries.

QuantForge – Quantitative Trading Platform | Python, FastAPI, PostgreSQL, Redis, Docker, Kubernetes

- Architected a backtesting engine that simulates how a trading strategy would've performed on real historical data, modeling realistic costs like slippage, fees, and position-sizing through a Market→Signal→Order→Fill pipeline, backed by 205 tests (+63% growth) across 45 type-hinted modules (~6.9K LOC).
- Modeled a risk/performance analytics layer reporting the standard metrics traders use to judge a strategy using Sharpe, Sortino, CAGR, Max Drawdown, VaR, and Calmar through a Pydantic-validated REST API with 21 endpoints.
- Deployed on Docker/Kubernetes with HPA autoscaling and Prometheus/Grafana monitoring, and cut API latency 2.4x (17.9ms → 7.4ms) with Redis caching.

BI Dashboards | Power BI, Tableau, DAX, SQL

- EU Pharma Sales Analytics: Analyzed 62K+ pharma sales transactions across 9 countries (€8.6M revenue, 28% margin) in a Power BI dashboard, built on a Kimball star-schema model with 15 DAX measures.
- Global BMW Sales Analysis: Designed a Tableau dashboard visualizing 253M+ units in sales across 11 models and 6 regions (2010–2024) by fuel type, transmission, and region.

ACHIEVEMENTS

Top 10 Finalist, Manipal Hackathon 2025 – 6th/869 teams nationwide for ResourceX, a sustainable supply-chain digital twin.

Top 6 Finalist, Manipal TechFest 2025 – 6th/64 teams for Spendwise, a budget tracker with impulsive-purchase detection and a budgeting chatbot.

Top 25 Semi-Finalist, Honeywell Hackspace 2025 – Shortlisted by Honeywell judges for WeathAware, a report summarizer for pilots and ATC.

TECHNICAL SKILLS

Languages: Java, Python, C, SQL (PostgreSQL, Oracle), JavaScript

Frameworks and Libraries: React, FastAPI, Material-UI, TensorFlow, Scikit-Learn, Pandas, Numpy, Pattern Recognition, XGBoost

MLOps & Cloud: Databricks (Delta Lake, Unity Catalog, MLflow), Docker, Kubernetes, Prefect, GitHub Actions (CI/CD)

GenAI & Agentic AI: LangGraph, ChromaDB (RAG), Ollama, Gemini

Data Analytics: Exploratory Data Analysis (EDA), Statistical Modeling, Feature Engineering

Tools: Git, Jupyter, Supabase, Power BI, Tableau, Excel
